➤ [Diagnostics-4-Future Conference](#)

„Diagnostics-4-Future Conference“ is an international meeting-place for users and providers in diagnostics and adjacent fields. Based on questions in medical care, clinics and laboratories, innovative solutions for new diagnostics are discussed including research and development. The focus is also on solutions for rural areas (point-of-care). Organiser is the international competence network for diagnostics DiagNET that is funded by the Interreg V-Program.

Become a partner and exhibitor:

The conference offers you a perfect platform to showcase your products and services to decision-makers, to collect your feedback and generate new business leads. The offer is exclusive and limited. Signing on earlier will allow you to maximize exposure to hard-to-reach decision makers.

Special: Call for posters

Seize the opportunity to submit an abstract for the poster session to showcase your achievements to leaders and hidden champions in diagnostics from different European countries. Posters may present fundamental/applied science and technology, new products as well as innovations in clinical adoption.

10 participants admitted to the Poster Award receive free admission, if they are students or PhD students.

The deadline of submission is October 16th, 2019.
